WORK EXPERIENCE

First Demat | Frontend Lead

Nov 2025 - Present

Ranchi, India

[Play Store](#) | [App Store](#)

- Built a **custom WebSocket client** for real-time market streaming with reconnect handling, heartbeat monitoring, and endpoint fallback.
- Reduced ticker latency and backend overhead by directly decoding **binary market packets** on the client instead of consuming serialized JSON payloads.
- Reduced **backend load by 30%** using request queuing, local caching, retry handling, and offline-first synchronization workflows.
- Improved **option chain rendering** and high-frequency market synchronization on **Next.js** based trading interfaces.
- Set up **CI/CD pipelines** for automated testing and deployment workflows across mobile and web applications.
- Built internal reusable packages for networking, logging, and state synchronization across projects.

5paisa Capital Ltd. | Software Developer

Oct 2024 - Sept 2025

Bangalore, India

[Play Store](#) | [App Store](#) (10M+ downloads)

- Migrated the **5paisa app** from native Android/iOS codebases to Flutter, reducing duplicate platform-specific implementation effort.
- Owned **F&O and Mutual Funds** modules involving real-time market updates, transactional workflows, and high-frequency state synchronization.
- Built a dual-channel **WebSocket** setup with reconnect handling, automatic fallback switching, and lifecycle-aware connection management, reducing **session drops by 90%**.
- Improved average **screen load time from 1.7s to 0.95s** using caching, pagination, deferred execution, and optimized request handling.
- Built native integrations using **Kotlin** and **Swift** for SDK interoperability, app lifecycle handling, and platform-specific workflows.
- Improved option chain rendering and ticker updates by optimizing stream processing and reducing unnecessary UI rebuilds.
- Achieved **85%+ test coverage** across critical modules using unit, widget, and golden tests.

EDUCATION

Bachelor of Technology (IT)

MAIT(GGSIPU), ROHINI

June 2017 - Aug 2021

Delhi, India

Aggregate GPA: 7.9

Antino Labs | Senior Software Engineer

March 2024 - Oct 2024

Bangalore, India

Flash.co : Order tracking rewards app

[Play Store](#) | [App Store](#) (1M+ downloads)

- Refactored **fl_chart** internals for real-time frame-synced rendering, delivering **4x smoother transitions** and reducing rendering jank on lower-end devices.
- Built native **WebView integrations** with two-way communication between native and cross-platform runtimes using platform channels.
- Implemented **server-driven rendering** flows to dynamically control layouts, feature visibility, and personalized user experiences, increasing feature engagement by **18%**.
- Built shared internal tooling and reusable modules for faster cross-platform feature delivery and reduced duplicate implementation.
- Reduced **frame drops by 35%** on content-heavy screens using repaint isolation, lifecycle-aware rendering, and animation optimization techniques.

Tech Alchemy | Software Engineer

July 2021 - Feb 2024

Remote, India

Links: [Are You In?](#), [Perro](#), [Fight Out](#)

- Improved **API performance by 60%** and optimized graph rendering by **4.3x** in React and Next.js applications using caching, virtualization, and redraw optimization.
- Built **deep linking** and **magic link onboarding** flows using token-based authentication and route-aware navigation systems.
- Developed shared networking layers with local caching, pagination, centralized request handling, and interceptor-based error management.
- Integrated **Web3Auth** for embedded wallet creation and cross-platform authentication across web and mobile platforms.
- Built a custom media player with buffered progress tracking, background playback handling, seek controls, and lifecycle-aware playback management.
- Worked with **Docker**-based development environments and followed **TDD** practices across critical modules.

SKILLS

Languages: Dart, TypeScript, JavaScript, Kotlin, Swift

Frontend & Mobile: Flutter, React, Next.js, React Native, HTML/CSS

Systems & Engineering: WebSockets, Caching Strategies, Offline-First Architecture, TDD, Integration testing

Dev Tools & Integrations: Firebase, Mapbox, Web3Auth, Analytics SDKs, Payment SDKs, Feature Flagging, Remote Config
